

Gaming Review Platform — Product Requirements Document (PRD)

1. Project Overview

Project Name

GameVerse (temporary name)

Project Type

Full-Stack Gaming Review & Discovery Platform

Purpose

Build a modern gaming review platform where users can:

- Discover games
- Read and write reviews
- Rate games
- Create profiles
- Save favorite games
- Explore trending games
- Engage with gaming content

The project will serve as:

- A flagship portfolio project
 - A resume-worthy full-stack application
 - A practical learning project for modern web development
 - A demonstration of AI-assisted (vibe coding) development workflow
-

2. Vision Statement

Create a visually modern and interactive gaming platform inspired by modern gaming communities like:

- IGN
- Backloggd
- Steam
- Metacritic

- Mocket

The platform should feel:

- Fast
 - Responsive
 - Immersive
 - Modern
 - Community-driven
 - Scalable
-

3. Main Goals

Technical Goals

- Learn full-stack development
- Build scalable frontend architecture
- Learn authentication systems
- Implement REST APIs
- Integrate external APIs
- Learn database relationships
- Deploy production-ready application

Portfolio Goals

The project should demonstrate:

- React/Next.js skills
 - Tailwind CSS
 - Backend development
 - Authentication
 - API integration
 - Database design
 - Responsive UI
 - Product thinking
 - Real-world application architecture
-

4. Target Audience

Primary Users

- Gamers

- Students
- Gaming enthusiasts
- Casual players

Secondary Users

- Recruiters
 - Internship evaluators
 - Portfolio reviewers
 - Developers
-

5. Tech Stack

Frontend

- Next.js
- React.js
- Tailwind CSS
- shadcn/ui
- Framer Motion
- Lucide Icons

Backend

Recommended:

- Supabase

Alternative:

- Node.js + Express.js

Database

- PostgreSQL (via Supabase)

Authentication

- Clerk OR Supabase Auth

External APIs

- RAWG API

Deployment

Frontend:

- Vercel

Backend:

- Supabase

Version Control

- Git
- GitHub

AI Development Tools

- Cursor
 - ChatGPT
 - v0 by Vercel
-

6. Core Features

6.1 Authentication System

Features

- Sign up
- Login
- Logout
- Protected routes
- Persistent sessions
- Forgot password
- Google login (optional)

User Flow

1. User clicks login/signup
2. Authentication modal/page opens
3. User authenticates
4. Redirect to dashboard/homepage

Pages Required

- Login Page
 - Signup Page
 - Forgot Password Page
-

6.2 Homepage

Objective

Create an immersive gaming homepage.

Sections

- Hero banner
- Trending games
- Top rated games
- Popular genres
- Recently reviewed
- Featured reviews
- Call to action section
- Footer

UI Requirements

- Dark gaming theme
 - Neon glow effects
 - Smooth animations
 - Responsive layout
-

6.3 Explore Games Page

Features

- Browse all games
- Infinite scrolling
- Filters
- Search functionality
- Genre filtering
- Rating sorting
- Platform filtering

Filters

- Genre
 - Rating
 - Release year
 - Platform
 - Popularity
-

6.4 Game Details Page

Features

- Game banner
- Screenshots
- Description
- Rating
- Genre tags
- Trailer section
- Reviews section
- Add review button
- Favorite button

Sections

1. Hero section
2. Game info
3. Media gallery
4. Reviews
5. Similar games

API Data

Use RAWG API for:

- Images
 - Descriptions
 - Genres
 - Ratings
 - Screenshots
 - Trailers
-

6.5 Review System

Features

- Create review
- Edit review
- Delete review
- Like review
- Rate games
- Comment on reviews (Phase 2)

Review Structure

- Review title
- Review content
- Star rating
- Pros & cons
- Timestamp

Validation

- Minimum review length
 - Rating required
-

6.6 User Profile System

Features

- Profile picture
- Username
- Bio
- Favorite games
- User reviews
- Activity history
- Stats section

Stats

- Reviews written
 - Average rating
 - Favorites count
 - Games completed
-

6.7 Search System

Features

- Real-time search
 - Search suggestions
 - Debounced search
 - Search by:
 - Game title
 - Genre
 - Tags
-

6.8 Favorites / Wishlist

Features

- Save games
 - Remove games
 - Wishlist page
 - Favorites count
-

6.9 Admin Features (Optional Advanced)

Features

- Remove inappropriate reviews
 - Manage users
 - Feature reviews
 - Dashboard analytics
-

7. Non-Functional Requirements

Performance

- Fast loading
- Optimized images
- Lazy loading
- API caching

Responsiveness

- Mobile-first design
- Tablet support
- Desktop optimization

Accessibility

- Proper semantic HTML
- Keyboard navigation
- Accessible forms

SEO

- Meta tags
 - Dynamic titles
 - Open Graph support
 - Server-side rendering
-

8. UI/UX Design Guidelines

Design Theme

Visual Style

- Dark gaming aesthetic
- Glassmorphism
- Neon accents
- Smooth animations
- Minimal but immersive

Colors

Primary:

- Black
- Dark gray
- Purple neon
- Blue neon

Typography

- Bold headings

- Modern sans-serif fonts

Animations

- Hover animations
 - Card transitions
 - Page transitions
 - Skeleton loading
-

9. Recommended Folder Structure

```
src/  
├─ app/  
├─ components/  
├─ features/  
├─ lib/  
├─ hooks/  
├─ services/  
├─ store/  
├─ types/  
├─ utils/  
├─ styles/  
└─ assets/
```

10. Database Schema

Users Table

```
users  
- id  
- username  
- email  
- avatar_url  
- bio  
- created_at
```

Reviews Table

```
reviews
- id
- user_id
- game_id
- title
- content
- rating
- created_at
```

Favorites Table

```
favorites
- id
- user_id
- game_id
```

11. API Requirements

RAWG API Endpoints

Needed Endpoints

Trending Games

```
/games
```

Game Details

```
/games/{id}
```

Screenshots

```
/games/{id}/screenshots
```

Trailers

```
/games/{id}/movies
```

12. Application Pages

Public Pages

- Home
- Explore
- Game Details
- Login
- Signup

Protected Pages

- Profile
 - Favorites
 - Dashboard
 - Write Review
-

13. State Management

Recommended

- Zustand

States Needed

- User state
 - Authentication state
 - Favorites state
 - Search state
 - Theme state
-

14. Development Phases

Phase 1 — Project Setup

Tasks

- Initialize Next.js app
- Setup Tailwind
- Setup shadcn/ui
- Configure routing
- Setup GitHub repo

Deliverables

- Working starter project
 - Responsive layout setup
-

Phase 2 — UI Development

Tasks

- Homepage UI
- Navbar
- Footer
- Game cards
- Hero sections
- Responsive design

Deliverables

- Complete frontend UI
-

Phase 3 — API Integration

Tasks

- Integrate RAWG API
- Fetch game data
- Build dynamic pages
- Add search

Deliverables

- Real game content
-

Phase 4 — Authentication

Tasks

- Setup Clerk/Supabase Auth
- Protected routes
- User sessions

Deliverables

- User login system
-

Phase 5 — Review System

Tasks

- Database setup
- Create review APIs
- CRUD operations

Deliverables

- Functional review platform
-

Phase 6 — User Features

Tasks

- Favorites
- User profiles
- Dashboard

Deliverables

- Personalized experience

Phase 7 — Polish & Optimization

Tasks

- Animations
- SEO
- Performance optimization
- Image optimization
- Error handling

Deliverables

- Production-ready project
-

15. Suggested AI Prompts For Vibe Coding

Homepage Prompt

Create a modern dark-themed gaming homepage using Next.js and Tailwind CSS with neon purple accents, trending game cards, glassmorphism navbar, hero banner, responsive layout, and smooth animations.

Game Card Prompt

Create a responsive gaming card component with hover animation, game image, title, genre, rating, and glassmorphism effects using Tailwind CSS.

Profile Page Prompt

Build a gaming profile dashboard with user stats, favorite games, recent reviews, dark gaming UI, and responsive design.

16. Deployment Checklist

Frontend

- Deploy on Vercel
- Setup environment variables
- Configure production build

Backend

- Setup Supabase project
- Configure database
- Enable authentication

Security

- Protect API keys
 - Use environment variables
 - Validate inputs
-

17. Environment Variables

```
NEXT_PUBLIC_RAWG_API_KEY=  
NEXT_PUBLIC_SUPABASE_URL=  
NEXT_PUBLIC_SUPABASE_ANON_KEY=  
CLERK_SECRET_KEY=  
NEXT_PUBLIC_CLERK_PUBLISHABLE_KEY=
```

18. Future Features (Advanced)

AI Features

- AI review summarizer
- Personalized recommendations
- AI-generated tags

Social Features

- Follow users
- Activity feed

- Notifications
- Messaging system

Gamification

- User badges
 - XP system
 - Achievement system
-

19. Common Risks & Challenges

Possible Issues

- API rate limits
- Complex state management
- Authentication bugs
- Responsive UI inconsistencies
- Slow performance

Solutions

- Use caching
 - Modular architecture
 - Reusable components
 - Lazy loading
 - Error boundaries
-

20. Success Metrics

Technical Success

- Fully responsive
- No major UI bugs
- Fast loading
- Working authentication
- Stable deployment

Portfolio Success

- Strong UI
- Real-world architecture
- Clean codebase

- Deployed live project
 - GitHub documentation
-

21. Resume Description

Resume Project Description

Developed a full-stack gaming review and discovery platform using Next.js, Tailwind CSS, Supabase, and RAWG API featuring authentication, dynamic game pages, review systems, favorites, responsive UI, and modern gaming-inspired design.

22. Final Development Strategy

Recommended Workflow

1. Plan pages and components
 2. Build UI first
 3. Integrate APIs
 4. Add authentication
 5. Add database features
 6. Polish animations
 7. Optimize performance
 8. Deploy production version
-

23. Recommended Timeline

Week	Goal
1	Project setup + UI foundation
2	Homepage + Explore page
3	API integration
4	Authentication
5	Review system
6	Favorites + profiles
7	Animations + optimization
8	Deployment + polishing

24. Final Notes

This project should prioritize:

- Clean architecture
- Strong UI/UX
- Modular components
- Real-world engineering practices
- Portfolio-quality polish

The goal is NOT to clone another website. The goal is to create a professional product inspired by modern gaming platforms while adding unique features and your own design identity.
